Wednesday Walk on the Boboyan Loop – 11 January 2012

This was our first walk for the year – one we hadn't done for a while. It was disappointing to find many weeds encroaching on what used to be high quality bushland. However, we saw some good plants and some flowers. The trees were lovely as always and we saw large areas of *Chrysocephalum semipapposum* flowering, many *Cullen microcephalum, Hibbertia obtusifolia, Pimelea curviflora* (including an orange one), *Hypoxis hygrometrica, Gompholobium huegelii, Lotus australis, Stylidium graminifolium, Helichrysum rutidolepis, Baeckea gunniana, Leptospermum myrtifolium*, the last of the *Epacris breviflora*, one *Ozothamnus stirlingii* and even some very floriferous *Kunzea ericoides* plus some spectacular Poa. We added a considerable number of species to our post-fire list.
