Wednesday Walk on Meangora Road Property – 11 February 2012

We visited a private property off Meangora Road which runs off Endrick River Road just south of Nerriga. The drive in was tantalizing with several vegetation types including tall forest of *Eucalyptus sieberi* and a swampy area. Many of the plants we encountered were new to us and a lot of homework was done to identify them. We started off in a forested area which included *Eucalyptus radiata, E. dives* and a scribbly gum which may have been *E. rossii* or *E. sclerophylla*. The understory was fairly dense with a variety of species including *Leptomeria acida, Persoonia mollis* ssp. *? livens, P. microphylla, Boronia algida, Banksia spinulosa, Patersonia longifolia, P. sericea, Acacia ? amoena, A. terminalis, Laxamnnia gracilis, Mitrasacme polymorpha, Lomandra longifolia* and many others. Then on to a swampy area with *Eucalyptus ovata* around the edge as well as some *Leptospermum* ? *morrisonii, L. juniperinum, Baeckea utilis, Epacris microphylla* and many *Spiranthes australis*. After lunch we took another route on a fire trail to the edge of Morton National Park and saw among other things, *E. moorei, Allocasuarina nana, Phyllota phylicoides, Chloanthes parviflora, Persoonia laurina, P. lanceolata, Comesperma sphaerocarpum* and the unusual grass *Anisopogon avenaceus.*
