

Yerrabi Track 27<sup>th</sup> February 2019

Wednesday Walkers enjoyed their walk on the Yerrabi Track on 27<sup>th</sup> March. There has been more rain in Namadgi than locally so we were pleased to see a range of plants in flower and a good diversity in the understorey. Of particular note were species not previously recorded including *Eriochilus magenteus* and *Bossiaea riparia*. Roger, who took the included photos, sacrificed some blood to a March fly (what some of us will do for a good photo!).

	
<i>Bossiaea riparia</i>	<i>Eriochilus magenteus</i>
	
<i>Leucopogon fraseri</i>	March fly biting Roger (all in the name of science)
	Reed bee ( <i>Exoneura</i> sp.) feeding at extra-floral nectaries of <i>Acacia dealbata</i> . (I've only seen ants feeding this way previously)
