

## Wednesday Walk in Cuumbeun Nature Reserve (far south) – 23 April 2008

The walk started through private property to reach the southern most part of Cuumbeun Nature Reserve, south-east of Queanbeyan NSW. The area was burnt in 1985 but has recovered well. Some plants have regenerated into near monocultures in parts – eg *Pomaderris eriocephala* and *Daviesia mimosoides*. Plants of interest were *Hakea decurrens*, *Stypandra glauca*, *Styphelia triflora*, *Leptospermum multicaule* and *Persoonia rigida*. There are views of Googong Dam from the fire trail.
