

Wednesday Walk – Cypress Pine Walk – 9 April 2014

The Cypress Pine Lookout walk begins from the Namadgi Visitor Centre and wanders through some fairly weedy woodland before crossing the road. It then passes through some grassland and a gentle climb through granite outcrops to a spectacular lookout. We have been monitoring the regeneration since the 2003 bushfires and this year did it at a slightly later time than usual. We found lots to see, added a few extras to our list and saw some lovely autumn orchids - *Diplodinium reflexum* and *Eriochilus cucullatus*. We also saw *Glycine tabacina* flowering and *Correa reflexa* (pale green as well as pink) as well as a new plant which was fairly widespread and flowering - the sedge *Fimbristylis dichotoma*. There were some interesting grasses flowering too - *Sporobolus creber*, *Cymbopogon refractus* and *Enneapogon nigricans*. Many of the *Hibbertia obtusifolia* were flowering, a few *Hypericum gramineum* and just a couple of flowers on *Olearia tenuifolia* which had lots of lovely sticky new growth. There were a few flowers on some *Micromyrtus ciliata* and buds on *Cryptandra amara* var. *floribunda*. Other interesting plants that we don't see often were *Zieria cytisoides*, *Mirbelia pungens*, *Acacia penninervis* and some large *Persoonia rigida*. The views as always were spectacular - a very worthwhile walk.
