

Wednesday Walk – Wanniasa Hills – 24 June 2015

The walk was on the western side of Wanniasa Hills with great views to the Murrumbidgee Corridor and beyond. To return, we crossed under Erindale Drive and walked back on Farrer Ridge. We found great displays of *Leucopogon attenuatus* and *Cryptandra* sp. Floriferous (aka *C. amara* var. *floribunda*) in full flower - hillsides of the *L. attenuatus* in fact. They gave off a lovely honey perfume. There were a few flowers on *Acacia ulicifolia* and *A. gunnii* and we saw the first *Hovea heterophylla* of the season, flowering, as well as *Indigofera australis*. As always, the trees were amazing - some very old *Eucalyptus polyanthemos*, some supporting big clumps of *Amyema miquelii* and a couple of *Muellerina eucalyptoides* on one. We added a few new species to our already long list - *Arthropodium minus*, *Carex appressa*, *Glycine tabacina*, *Monotoca scoparia* and *Thelymitra* sp. For images below JG = Jean Geue; MB = Martin Butterfield
